

Learn More About It

THOMAS' LIQUID STAINLESS STEEL

Safety

1) How safe is it?

Thomas' Liquid Stainless™ and its High-Gloss Clear Topcoat are water-based coatings and require the same basic precautions as latex house paint.

2) How much does it smell?

Thomas' Liquid Stainless Steel™ and its High-Gloss Clear Topcoat are water-based polymers that emit less odor than ordinary latex house paint.

3) Does it contain any lead?

No, Thomas' does not contain any lead. As a public service, all paint manufacturers have placed notices on their cans to warn consumers if they are removing old house paint to make sure the old house paint does not contain lead.

4) Why is there a warning from the State of California?

As with most latex type house paints, the State of California has deemed that the ingredients in the resin may cause cancer and birth defects. Therefore, to be consistent with the standard policy of most paints, Thomas' should not be used to coat your skin or be taken internally, and should be used with adequate ventilation.
